Frontend engineer who starts from friction: notice what slows people down, own the fix end-to-end, then automate it so it stays fixed.

## EXPERIENCE

### Frontend Engineer — Bricsys 24/7 (Hexagon AB)

Sep 2023 - Mar 2026

Enterprise SaaS · CAD / BIM · React, TypeScript

- Conversion of Vue 2 to React as part of a migration using Module Federation (team effort).
- Built near-real-time projection of 3D annotations into 2D space for the browser based BIM viewer using React and CSS transforms across both 2D and 3D repos with shared functionality.
- Diagnosed and resolved critical localization failures after global Keycloak upgrade by implementing scalable language and dialect support and automating translation workflows.
- **Daily tasks included:** feature design, releasing (Azure), cross team feature ideation, writing documentation, component performance measuring, i18n/i11y, testing... etc.

## PROJECT HIGHLIGHTS

|                             |                                                                                                                                                                                                                                          |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Timesheet Automation</b> | Headless background process and CLI that pulls Git commits and PR data to auto-fill R&D entries into the internal Bricsys timesheets app. Turned a slow manual daily/weekly process - on an outdated UI - into an optional quick review. |
| <b>Fluidity-js</b>          | Published React library for interactive fluid effects on text and images — water, ink, glass, aurora. WebGL shaders running off the main thread via a Web Worker; strict TypeScript, CI, npm.                                            |
| <b>PIIPAYA</b>              | Local macOS app (Tauri/Svelte/Python) that redacts PII from documents while keeping the narrative coherent — James instead of NAME. OCR, PDF/DOCX, file batching; fully offline, shipped releases.                                       |

## SKILLS

|                     |                                                            |
|---------------------|------------------------------------------------------------|
| <b>Core:</b>        | React · TypeScript · JavaScript · Tailwind/SASS            |
| <b>AI/Tooling:</b>  | Claude Code · Python · Ollama · WhisperX · Bash            |
| <b>Ecosystem:</b>   | TanStack · Zustand · Node · Vite · Redux · ChakraUI        |
| <b>Experienced:</b> | Vue2 · Playwright · Figma · Keycloakify · Tauri · Three.js |
| <b>Languages:</b>   | Dutch (native) · English (C2) · French (B1)                |

## EDUCATION

### BA — Graphic and Digital Media

2019 - 2023

Artevelde University of Applied Sciences, Gent

- Full dev lifecycle: Concept → design (Adobe XD) → product (React/Python) → marketing (Indesign)
- Graduation project: developing route-optimization and map digitalization for city waste management services Renewi.

## PERSONAL

Once spent a whole year building JS animations, simulations and games just to understand building from the ground up — now happy that AI does the scaffolding while I think in intent. Roots in arts and classical music: infinite patience for pixel perfection, sensitive to friction. Off-screen: chess at the local club, BJJ, and one day, wingsuiting with a carpet.
